PRODUCT AS A WHOLE

INDIVIDUAL CONSTITUENTS

HEALTH HAZARDS

Ingestion and systemic absorption of the products may result in toxic effects on the central nervous system and on the cardiovascular system. Allergic reactions may also occur.

Significant adverse effects on intact skin are unlikely. Contact with mucous membranes may cause irritation plus numbness and loss of sensation.

Contact with the eye may cause irritation. Eye contact will also cause numbness and loss of sensation.

SIGNS AND SYMPTOMS OF EXPOSURE

Systemic effects may include nervousness, confusion, drowsiness, blurred vision, vomiting, tremors, convulsion, respiratory depression, slowing of the heart, blood pressure drop, and unconsciousness.

EMERGENCY AND FIRST AID PROCEDURES

Call a physician. Medical attention should include maintenance of breathing and controlling convulsions if they occur. If eye contact occurs, wash thoroughly with clean water for 15 minutes.

MEDICAL CONDITIONS AGGRAVATED BY EXPOSURE

Hypersensitivity to local anesthetics of the amide type.

COMMENTS:

Lidocaine hydrochloride is a local anesthetic agent, and like all local anesthetics it can depress excitable tissues. Thus it may cause adverse effects on the nervous system, on respiration, and on the cardiovascular system.
